Food Fraud

Dear Sirs,

To ensure product safety, meet legal requirements and prevent economic damage from fraudulent activities, Alfred Galke GmbH has implemented a system to combat food fraud.

As an importer of plant-based raw materials from all over the world, we start at the beginning of the supply chain:

- examination of the supply chain from the origins to identify vulnerabilities for potential fraud attempts (e. g. high-risk raw materials)
- supplier qualification after a strict selection according to our requirements
- incoming goods inspections with trained personnel who are also specifically sensitized to food fraud
- recording critical parameters in the monitoring for analytics
- this is in accordance with already known existing problems or based on current information from authorities, associations or the media

We assess potential risks and minimize them in the interest of our customers.

With best regards from Gittelde
Your QM Team of the Alfred Galke GmbH
